4.2A–D · PP. 213–227 · ARC A: 213–219; ARC B: 220–227

Digital systems change how organizations work

- Transactions create records for operations
- Shared tools can coordinate people across places
- Platform rules can distribute access to customers

AI conceptual illustration · not an actual company, venue or measured outcome

Operation and organization of a business

- Shared calendars and files can coordinate a team
- Databases and transaction systems record activity
- Data analysis can support stock, staffing or service decisions

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 213–214.

Customer value and business incentives

An organization may trade immediate profit for repeat use

Advertising, subscriptions and commissions reward different outcomes

The revenue model can influence what a system optimizes

1. Customer pays →

2. Business supplies a product/service →

3. Revenue meets costs or objectives

Trace an actual exchange. Advertising, commission and subscription have different payment relationships.

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 213–214.

APPLY · 4 · TEXTBOOK PP. 213–214

Transaction data becomes a decision

- An invented event shop records 12 badge sales and 4 poster sales
- A stock decision can use those totals
- The decision also needs context: stock, price and who attended

Item	Recorded sales	Question before ordering
Badge	12	Was stock available throughout?
Poster	4	Did price or stock limit purchases?

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 213–214.

Diversification and workforce diversity

> Diversification changes products, markets or the supply chain

> Workforce diversity concerns the people in an organization

> Inclusion concerns whether people can participate and feel respected

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 214–215.

Horizontal and vertical diversification

- Horizontal: add a complementary product or service
- Vertical: take over another part of the supply or production chain
- Classify the relationship, not merely the fact that a company grows

Strategy	Invented action	Relationship
Horizontal	Video service adds messaging	Complementary service
Vertical	Online shop runs delivery fleet	Another part of its chain

Concentric and conglomerate diversification

- Concentric: adapt an existing line for a wider audience
- Conglomerate: enter an unrelated product or industry
- The distinction follows the textbook’s definitions

Strategy	Invented action	Relationship
Concentric	Existing service adapted for business users	Wider audience
Conglomerate	Game firm enters agriculture	Unrelated activity

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 214–215.

Hiring systems affect opportunity

> A system can screen applicants quickly

> Historical labels can preserve past exclusion

> A relevant measure and a challenge route need evaluation

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 215–217.

A historical case needs a current check

> Textbook examples establish the chapter’s original discussion

> Current product details need a current primary source

> The underlying dilemma can remain relevant after a product changes

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 216–217.

Working practices and office design

> Digital tasks can change where and how work happens

> Office design can support collaboration or quiet work

> A flexible environment does not guarantee good working conditions

Remote work and digital nomadism

- Remote work uses networks to complete work away from a central workplace
- A digital nomad works remotely while moving between locations
- Connectivity, access and security can constrain that flexibility

AI conceptual illustration · not case evidence

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 217–218.

Crowdsourcing and crowdfunding

> Crowdsourcing gathers contributions, information or work

> Crowdfunding gathers money for a project or cause

> Both need decisions about participation and use

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 218–219.

Microwork, gig work and sharing

- Microwork consists of small tasks completed for payment
- Gig platforms match short-term service providers and customers
- Sharing arrangements provide access to assets or services

Microwork: small paid task	Gig: paid job or service	Sharing: access to a resource

These describe different arrangements; investigate who contributes, who pays and who sets the conditions.

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 219.

Platforms can mediate access to work

- A platform can match a worker and a customer
- Ratings and allocation rules can influence future access
- Workers may have limited information or control

1. Customer requests work →

2. Platform matches/allocates →

3. Worker performs task →

4. Payment subject to rules

Allocation and eligibility can shape opportunity. Check actual terms and worker evidence before judging the result.

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 217–219.

Employee organizations and bargaining power

> Workers can organize to seek better conditions

> Collective bargaining represents a group in negotiation

> A worker’s status and rights depend on the actual arrangement

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 219.

Real source Y: revenue share and creator income

- YouTube describes different payment bases for Watch Page and Shorts
- A revenue-share rate needs its denominator
- A share rate alone does not establish a creator’s income

Module	Stated share	Base
Watch Page ads	55%	Net advertising revenue
Shorts	45%	Allocated Creator Pool share

YouTube Partner earnings overview, checked 5 October 2026. https://support.google.com/youtube/answer/72902 Textbook connection: pp. 213–219.

Real source L: opportunities and working conditions

> The ILO examines different forms of platform work

> Its 2021 evidence is useful for historical context

> It cannot establish a current TikTok creator’s earnings

ILO, 23 February 2021, historical research summary. https://www.ilo.org/resource/news/rapid-growth-digital-economy-calls-coherent-policy-response-0 Textbook connection: pp. 217–219.

An impact becomes an implication through a reasoned link

> Mechanism: a rule changes visibility

> Impact: a named group receives a changed opportunity

> Implication: the longer-term significance depends on evidence and conditions

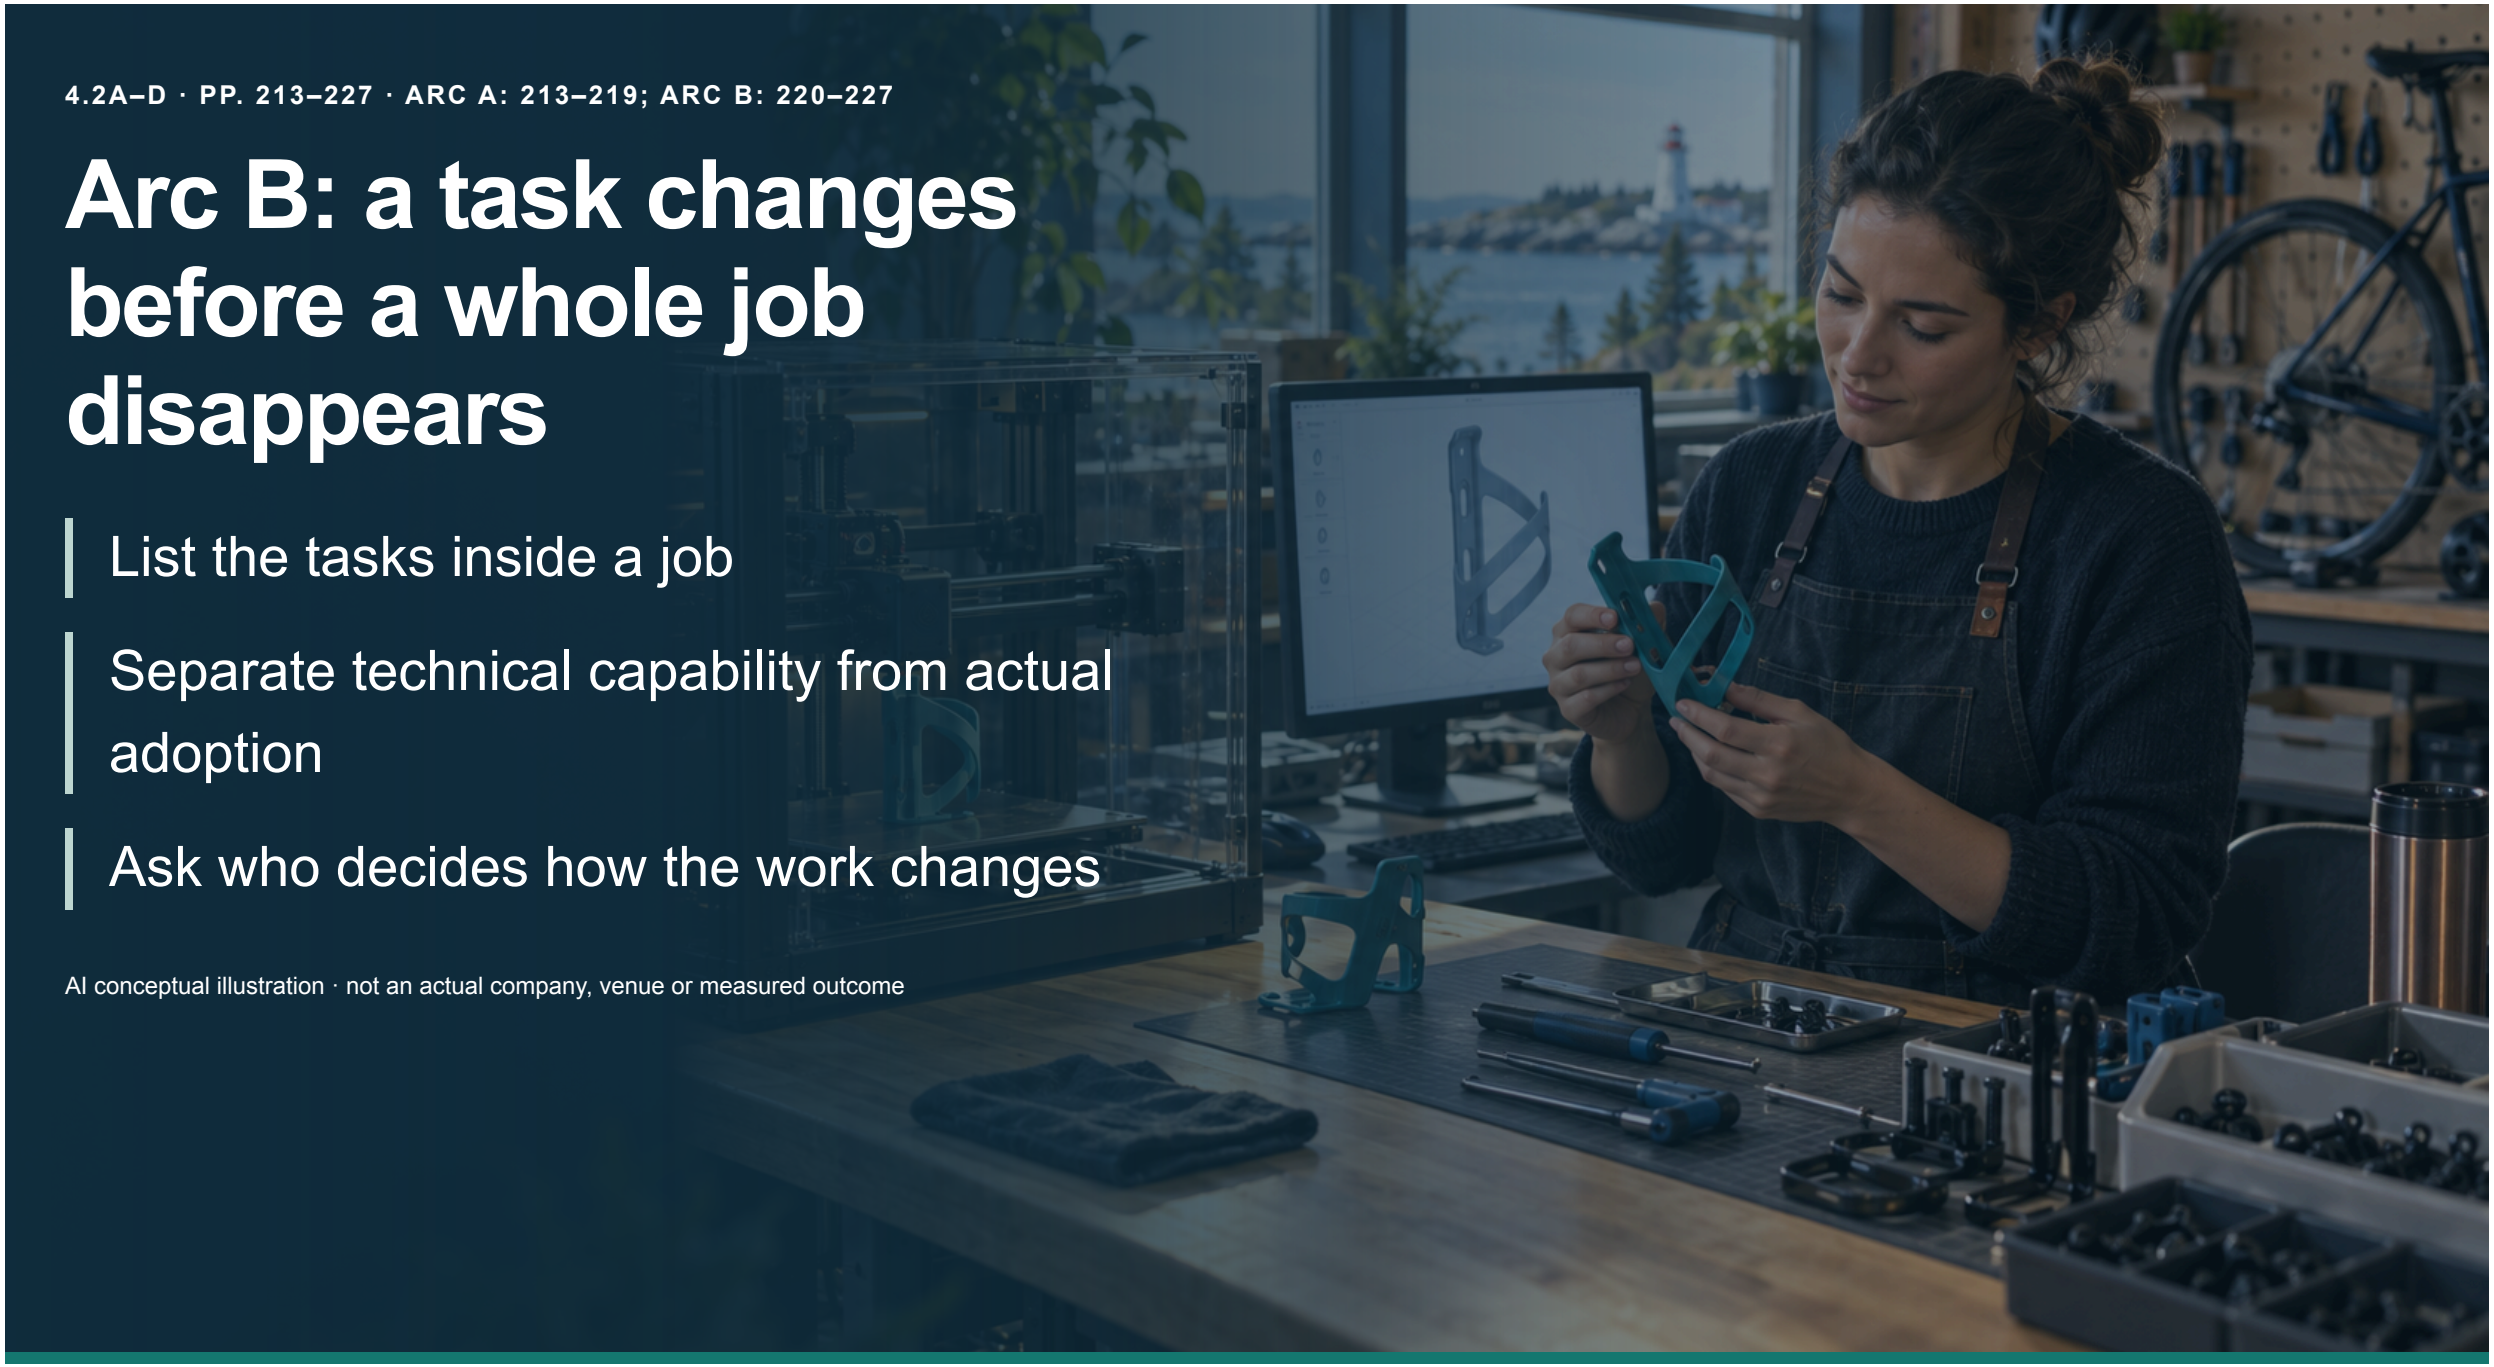

Bomfim et al., Digital Society for the IB Diploma, Hodder, 2022. Printed pages cited per slide. Original paraphrase. Textbook connection: pp. 213–219.

Pause: explain the first business arc

- Explain a transaction-to-decision mechanism
- Distinguish types of work and public contribution
- Continue to Arc B: automation, exchange and globalization

Arc B: a task changes before a whole job disappears

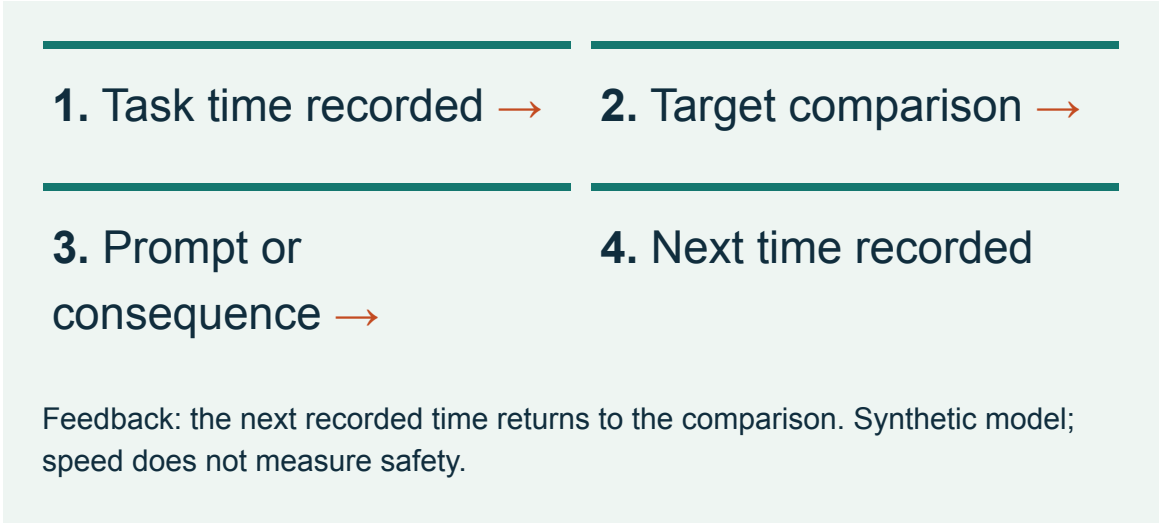

- List the tasks inside a job
- Separate technical capability from actual adoption
- Ask who decides how the work changes

AI conceptual illustration · not an actual company, venue or measured outcome

Monitoring can become a feedback loop

- Record a task time
- Compare it with a target
- Change an assignment, prompt or consequence

Feedback: the next recorded time returns to the comparison. Synthetic model; speed does not measure safety.

Hodder 2022, printed pp. 220–221. Original teaching paraphrase; synthetic examples unless a source is named.

E-commerce names the exchange, not the payment method

> B2B: business sells to business

> B2C: business sells to a consumer

> C2C: one consumer sells to another

Transaction	Parties	Category
Parts wholesaler → repair shop	Business → business	B2B
Repair shop → customer	Business → consumer	B2C
Used bicycle owner → another person	Consumer → consumer	C2C

Hodder 2022, printed pp. 221–222. Original teaching paraphrase; synthetic examples unless a source is named.

Check: automate, trade, or pay?

> Use the parties and task to justify the term

> Do not infer a worker outcome from a technical change

> Correct your first explanation, then try a new case

Hodder 2022, printed pp. 220–222. Original teaching paraphrase; synthetic examples unless a source is named.

Targeted marketing connects a signal to an audience

- Recorded signal → inferred interest
- Audience selection → advert shown
- Response becomes possible feedback

1. Page visit observed →

2. Cycling interest inferred →

3. Audience selected →

4. Advert shown

A later click is a possible feedback signal, not proof of intention or causal persuasion.

Hodder 2022, printed pp. 222. Original teaching paraphrase; synthetic examples unless a source is named.

Currency and payment are different layers

- Currency expresses value, such as Canadian dollars
- A payment system moves a claim or balance
- A cashless transaction need not use cryptocurrency

1. Price: CAD 20 →

2. Settlement: card network →

3. Balance changes →

4. Receipt of payment

Illustrative transaction. Currency is the unit; the payment system is the settlement route.

Hodder 2022, printed pp. 223. Original teaching paraphrase; synthetic examples unless a source is named. Current-context source checked 11 October 2026: https://www.bankofcanada.ca/2026/02/what-is-money/

A token record does not automatically transfer copyright

> Token: a recorded identifier or claim under a system’s rules

> NFT: a non-interchangeable token identifier

> Rights to an associated work require separate evidence

Ledger identifier	Associated digital file	Separate licence or rights

Token transfer and rights transfer require separate evidence. A link is not a copyright licence.

Hodder 2022, printed pp. 223. Original teaching paraphrase; synthetic examples unless a source is named. Current-context source checked 11 October 2026: https://www.wipo.int/en/web/wipo-magazine/articles/non-fungible-tokens-nfts-and-copyright-42365

Check: identify what changed hands

> Name the currency or token

> Name the settlement method

> Identify the rights you can actually establish

Hodder 2022, printed pp. 223. Original teaching paraphrase; synthetic examples unless a source is named.

Cashless convenience can create an access barrier

- Fast settlement can help customers and sellers
- A working device, account and network may be required
- Keep an alternative for people or outages the design excludes

Design choice	Potential gain	Question to test
App only	Quick payment for connected users	Who cannot access the app?
App + alternative	More routes during an outage	What staffing and costs are needed?

Hodder 2022, printed pp. 223. Original teaching paraphrase; synthetic examples unless a source is named. Current-context source checked 11 October 2026: https://www.bankofcanada.ca/2026/02/what-is-money/

Small purchases can add up

- Microtransaction: a small digital purchase
- Loot box: a random or mystery reward
- Repeated spending is different from a single price

1. $2 each →

2. 12 purchases →

3. 12 × $2 →

4. $24 total

Synthetic spending example. A small price does not set a cumulative limit.

Hodder 2022, printed pp. 223–224. Original teaching paraphrase; synthetic examples unless a source is named.

From a digital model to a physical object

- CAD model → slicing instructions
- Material added layer by layer
- Inspect the part before use

1. CAD geometry →

2. Slice into paths/layers →

3. Deposit material →

4. Inspect dimensions

Simplified filament process. A successful print does not establish suitability or safety.

AI conceptual illustration · not case evidence

Hodder 2022, printed pp. 224. Original teaching paraphrase; synthetic examples unless a source is named.

Check: a gain needs a comparison

> State the mechanism that could produce a benefit

> Name what remains unmeasured

> Choose a fresh case for your corrected explanation

Hodder 2022, printed pp. 223–224. Original teaching paraphrase; synthetic examples unless a source is named.

Globalization connects customers, suppliers and workers

- Borderless selling reaches customers in another country
- Global sourcing obtains inputs internationally
- Digital connections do not remove physical constraints

1. Supplier abroad → input →

2. Local business → production →

3. Customer abroad → sale

Global sourcing and borderless selling are different directions in the business relationship.

Hodder 2022, printed pp. 225–226. Original teaching paraphrase; synthetic examples unless a source is named.

Location and organizational boundary are separate questions

- Offshoring: move an operation to another country
- Outsourcing: have an external organization do a task
- An operation can be both, either, or neither

Support arrangement	Location change	External provider?
Own overseas team	Offshore	No
Local contractor	Domestic	Yes: outsourced
Overseas contractor	Offshore	Yes: outsourced

Hodder 2022, printed pp. 226. Original teaching paraphrase; synthetic examples unless a source is named.

A judgement compares whose costs and gains count

> Customer: access, price, reliability

> Worker: tasks, conditions, influence

> Organization: costs, reach, resilience

Hodder 2022, printed pp. 225–227. Original teaching paraphrase; synthetic examples unless a source is named.

Retrieve, submit, correct, revisit

> Close notes: distinguish location from contracting

> Use the chapter Form for the assigned route

> Keep the first response and submit a correction after feedback

Hodder 2022, printed pp. 226–227. Original teaching paraphrase; synthetic examples unless a source is named.
