

British Library Source-Lens Dossier

F-P-DS-U01-001 | British Library Source-Lens Dossier

Name _____

Date _____

Complete an Operation 7 dossier on the British Library cyberattack, then use it to produce one source-grounded Paper 1-style response with a qualified judgement.

Assignment duration: three full 70-minute classes. Each class completes named Operation 7 gates and preserves evidence in one unified dossier.

Teacher-created Paper 1-style practice

Evaluate the extent to which the British Library cyberattack shows that power in digital society depends on control of infrastructure.

This is original classroom practice, not an official IB examination question.

Three-class sprint

Class A · Gates 1–3: establish what can be claimed	Define the technology/system, reconstruct the supported incident-and-recovery mechanism, mark unknowns and complete the British Library/ICO/NCSC evidence matrix.
Class B · Gates 4–6: analyse significance	Differentiate stakeholders, select the strongest 3Cs, build impact-to-implication chains, then add a source-grounded counter-perspective and trade-off.
Class C · Gate 7: judge and calibrate	Write the response from the dossier, compare it with weak/secure/Grade-7-oriented exemplars, revise the weakest gate and defend the final degree judgement.

Pathways that add real complexity

Tier 1 Structured dossier	Use the seven labelled frames and sentence stems; every Operation 7 gate must still contain case evidence.
Tier 2 Independent synthesis	Choose and organize evidence independently while maintaining all seven gates and explicit source limitations.
Tier 3 Transfer challenge	Apply Operation 7 to a second digital-society case and compare how context changes the judgement.

Operation 7 completion gates

1. Technology and the precise digital system
2. How it works: supported causal mechanism
3. Attributed evidence with origin, usefulness and limitation

4. Distinct stakeholders plus the strongest 3C lenses
5. Immediate impact and conditional implication
6. Counter-perspective and genuine trade-off
7. Qualified judgement: extent, conditions and uncertainty

Required evidence

1. Gate 1: precise technology and system definition
2. Gate 2: annotated causal mechanism with supported, inferred and unknown links
3. Gate 3: three-source evidence matrix with usefulness and limitation
4. Gate 4: two distinct stakeholders and selected 3C lenses
5. Gate 5: impact-to-implication chains with timeframe and condition
6. Gate 6: evidence-based counter-perspective and named trade-off
7. Gate 7: calibrated Paper 1-style response with qualified judgement

Foundation checkpoints

Day 1 Operation 7 Gates 1–3: claim only what evidence supports	Gates 1–3 are complete: precise system definition, supported/inferred/unknown mechanism map and three-source matrix with limitations.
Day 2 Operation 7 Gates 4–6: analyse significance	Gates 4–6 are complete for two distinct stakeholders; implications are conditional; counter-perspective and trade-off are evidence-based.
Day 3 Operation 7 Gate 7: judge, calibrate and defend	The final response visibly integrates all seven Operation 7 gates, uses at least two attributed sources and ends with a conditional degree judgement.

Written response plan

Point, evidence, mechanism, lens, counter-perspective, trade-off and conditional judgement:

Teacher confirms achievement. Retain the editable/process evidence with the final product.
