| Criterion                                                 | 1 Beginning                                                     | 2 Developing                                                                   | 3 Secure                                                                                  | 4 Extending                                                                                                                |
|-----------------------------------------------------------|-----------------------------------------------------------------|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>Terminology and question focus</b><br>AO1 / DS-U01-001 | Terms remain vague or the response drifts from the question.    | Relevant terms appear, but the exact demand is only partly addressed.          | Precise terminology sustains a clear answer to the exact question.                        | Terminology supports a nuanced interpretation and remains controlled throughout.                                           |
| <b>Technical mechanism</b><br>AO2 / DS-U02-006 / U03-004  | Technology is named without explaining how it causes an effect. | Some stages appear, but causal links remain general or incomplete.             | An accurate system chain explains how a decision produces stakeholder consequences.       | The mechanism identifies decision points, uncertainty and where safeguards alter the chain.                                |
| <b>Evidence and source use</b><br>DS-IQ-003               | Claims lack relevant evidence or misrepresent a source.         | Relevant evidence appears, but origin or limitation receives little attention. | Specific evidence supports claims and source purpose/limits are considered.               | Evidence is triangulated; sources are judged as useful for particular claims rather than ranked absolutely.                |
| <b>Stakeholders and 3Cs</b><br>DS-U01-002 / IQ-004        | Stakeholders or course lenses are listed without analysis.      | One perspective and concept connect loosely to the case.                       | Distinct stakeholders and selected 3Cs shape the analysis.                                | Connections between mechanism, stakeholders and 3Cs reveal unequal effects and competing priorities.                       |
| <b>Evaluation and judgement</b><br>AO3 / DS-IQ-005        | The response describes or makes unsupported extreme claims.     | A counterpoint appears, but the conclusion mainly summarizes.                  | Impacts and implications are distinguished; a trade-off supports a conditional judgement. | The judgement weighs significance, timeframe, probability and uncertainty while identifying what evidence could change it. |
